Abstract

Acknowledgements

1 Introduction

1.1 Scope of the Thesis ........................................ 4
1.2 Contributions .............................................. 5
1.3 Chapter Outline ........................................... 5

2 Background

2.1 Words and Languages ....................................... 7
2.2 Transition Systems .......................................... 8
  2.2.1 Basic Transition Systems ............................. 8
  2.2.2 Fair Transition Systems ............................. 9
2.3 Syntactic Representation ................................... 11
  2.3.1 Assertion language .................................. 11
  2.3.2 System Specifications .............................. 12
2.4 Temporal Logic ............................................. 13
  2.4.1 Syntax .............................................. 13
  2.4.2 Semantics .......................................... 15
  2.4.3 Ground-quantified CTL* ........................... 18
  2.4.4 The Model Checking Problem ..................... 18
2.5 Algorithmic Model Checking ................................. 18
  2.5.1 The Automata-theoretic Approach ................. 19
  2.5.2 Local Model Checking ............................. 19
  2.5.3 Symbolic Model Checking .......................... 20
  2.5.4 Reduction Techniques ............................. 20
2.6 Deductive Approaches to Model Checking ............... 21
  2.6.1 Verification Conditions ........................... 21
3 LTL Proof Structures

3.1 Definition of LTL Proof Structures
3.1.1 Discussion of the Rules
3.1.2 The Split Condition (A-SPL)
3.1.3 Derived Rules
3.2 The Success Criterion
3.2.1 Successful Paths
3.2.2 A Tentative Success Criterion for Proof Structures
3.2.3 Trails and Success for Proof Structures
3.3 A Rule for Proving Success
3.3.1 Rule A(F, ∨ F G)
3.3.2 Rule A(S)
3.4 Some Examples
3.4.1 A Guarantee Property
3.4.2 A Safety Property
3.4.3 A Persistence Property

4 Soundness and Completeness via Games

4.1 CTL* Games
4.1.1 Game Definition
4.1.2 Characterisation of CTL* satisfaction
4.2 Trails and Strategies
4.2.1 Generative Paths and Admissibility
4.2.2 Internal Strategies of Trails
4.2.3 Winning and Losing Strategies
4.2.4 Represented Strategies
4.2.5 Winningness and Admissibility
4.2.6 Admissibility vs. Success
4.3 Existence of a Proof Structure
4.4 Soundness and Completeness of Rule A(S)
4.5 Main Result

5 ELL and CTL* Proof Structures

5.1 ELL Proof Structures
5.1.1 Some Remarks on the Rules
5.1.2 Derived Rules
CONTENTS

8.2.2 Deductive and Semi-Algorithmic Methods . . . . . . . . . 154
8.2.3 Model Checking Games . . . . . . . . . . . . . . . . . . . . 157
8.3 Directions for Future Work . . . . . . . . . . . . . . . . . . . . 159
