

## 263-2300-00: How To Write Fast Numerical Code

Assignment 5

Due Date: Thu May 5 17:00

<http://www.inf.ethz.ch/personal/markusp/teaching/263-2300-ETH-spring11/course.html>

In these 2 weeks you will continue to work on your research project. A rough outline on a possible plan how to conduct your project was given in the previous homework (**read it again**). You will use your project svn which is different from your homework svn.

You are encouraged to use the office hours (in particular those of MP) for questions on the project. You can also get an appointment outside the office hours - just email. In May we will also schedule one-on-one meeting with MP to discuss the progress and possible next steps.

**For the due date above you have to submit the following to the project svn:**

1. The current status of your code maintained in your subdirectory called code/
2. In the root directory a document called report2.pdf where you **briefly** (e.g., half a page or one page text) describe what you did during this period. You are encouraged to include relevant graphics if available, which then should be briefly explained. Include compiler, version, and flags were applicable. Don't be overly exhaustive. Just provide the crucial information.
3. Include in your report a **brief** paragraph explaining how you divided the work among the team members and who did what so far.
