

263-2300-00: How To Write Fast Numerical Code

Assignment 4: Work on project

Check point: Thu April 5 17:00

<http://www.inf.ethz.ch/personal/markusp/teaching/263-2300-ETH-spring12/course.html>

Questions: fastcode@lists.inf.ethz.ch

- In these 2 weeks there is a one week homework. The other week is allocated for you to start working on your research project. Remember that the project counts for 40% of the overall grade.
- All projects are listed on the website and each one has a project number xx.
- For each project we created an svn directory (**different from your homework svn**) at https://svn.inf.ethz.ch/svn/pueschel/students/trunk/s12-fastcode/project_xx/
Use this directory for your development.
- In the main folder of your project svn you will find a text file called **checklist-report.txt**. Read it. It gives you a rough outline how to pursue your project. The details can vary of course. It also serves as a continuously updated short report in that you add a brief comment for each point completed.
- Every project period has a check point (see top of the page). Before that time point
 1. Update svn with the latest code.
 2. Update checklist-report.txt.

In the end it is up to you how you organize your project work but we recommend working regularly on it as time permits.
