Homework 8 - Problem

-Wave Equation

### [H6.3] Wave Equation

The wave equation has been written as:

$$\frac{\partial^2 u}{\partial t^2} = c^2 \cdot \frac{\partial^2 u}{\partial x^2}$$

(ロ)、(型)、(E)、(E)、 E、 の(の)

Homework 8 - Problem

Wave Equation

# [H6.3] Wave Equation

The wave equation has been written as:

$$\frac{\partial^2 u}{\partial t^2} = c^2 \cdot \frac{\partial^2 u}{\partial x^2}$$

Let us rewrite u(x, t) as  $\tilde{u}(v, w)$ , where:

 $v = x + c \cdot t$  $w = x - c \cdot t$ 

Homework 8 - Problem

Wave Equation

# [H6.3] Wave Equation

The wave equation has been written as:

$$\frac{\partial^2 u}{\partial t^2} = c^2 \cdot \frac{\partial^2 u}{\partial x^2}$$

Let us rewrite u(x, t) as  $\tilde{u}(v, w)$ , where:

 $v = x + c \cdot t$  $w = x - c \cdot t$ 

What happens?

Homework 8 - Problem

Poiseuille Flow Through a Pipe

#### [H6.9a] Poiseuille Flow Through a Pipe

The following equations describe the stationary flow of an incompressible fluid through a pipe:

$$\frac{d\hat{v}}{d\rho} = \frac{-\sqrt{2\Gamma}}{(\tau_M + 1)^2} \cdot \rho \cdot \tau^2$$
$$\frac{d}{d\rho} \left(\frac{\rho}{T} \cdot \frac{d\tau}{d\rho}\right) = \frac{-\Gamma}{(\tau_M + 1)^3} \cdot \rho^3 \cdot \tau^2$$

where:

$$\rho = \frac{r}{R}$$
$$\tau = \frac{T(r)}{T_W}$$

are two normalized coordinates. *r* is the distance from the center of the pipe, and *R* is the radius of the pipe. T(r) is the temperature of the fluid at a distance *r* from the center, and  $T_W$  is the temperature of the pipe wall.  $T_W$  is assumed constant.  $\hat{v} = k_1 * v$  is the normalized flow velocity, where  $k_1$  is a constant that depends on the viscosity, the thermal conductivity, and the average temperature of the fluid.

Homework 8 - Problem

Poiseuille Flow Through a Pipe

### [H6.9a] Poiseuille Flow Through a Pipe II

The boundary conditions are:

$$\begin{aligned} &\frac{d\hat{v}}{d\rho}(\rho=0.0)=0.0\\ &\frac{d\tau}{d\rho}(\rho=0.0)=0.0\\ &\hat{v}(\rho=1.0)=0.0\\ &\tau(\rho=1.0)=1.0\end{aligned}$$

Thus, this is a *boundary value problem*.

◆□▶ ◆□▶ ◆目▶ ◆目▶ ▲□ ◆ ⊙へ⊙

Homework 8 - Problem

Poiseuille Flow Through a Pipe

# [H6.9a] Poiseuille Flow Through a Pipe II

The boundary conditions are:

$$\begin{aligned} &\frac{d\hat{v}}{d\rho}(\rho=0.0)=0.0\\ &\frac{d\tau}{d\rho}(\rho=0.0)=0.0\\ &\hat{v}(\rho=1.0)=0.0\\ &\tau(\rho=1.0)=1.0\end{aligned}$$

Thus, this is a *boundary value problem*.

The equations contain two yet unknown parameters.  $\Gamma$  is a constant that depends on the fluid. Let us assume that  $\Gamma = 10.0$ .  $\tau_M$  is the value of the normalized temperature at the center of the pipe. We shall introduce the momentary value of that temperature into the equation, and adjust that value as the simulation proceeds.

Homework 8 - Problem

Poiseuille Flow Through a Pipe

### [H6.9a] Poiseuille Flow Through a Pipe III

We wish to simulate this problem across  $\rho$  in the range  $\rho = [0.0, 1.0]$  with unknown initial conditions  $\hat{v}(\rho = 0.0) = \hat{v}_M$  and  $\tau(\rho = 0.0) = \tau_M$ .

Homework 8 - Problem

Poiseuille Flow Through a Pipe

#### [H6.9a] Poiseuille Flow Through a Pipe III

We wish to simulate this problem across  $\rho$  in the range  $\rho = [0.0, 1.0]$  with unknown initial conditions  $\hat{v}(\rho = 0.0) = \hat{v}_M$  and  $\tau(\rho = 0.0) = \tau_M$ .

We begin by introducing an additional variable:

$$w = \frac{\rho}{T} \cdot \frac{d\tau}{d\rho}$$

A D M 4 目 M 4 日 M 4 1 H 4

We thus obtain three first-order ODEs in the variables  $\hat{v}$ , w, and  $\tau$ .

Homework 8 - Problem

Poiseuille Flow Through a Pipe

### [H6.9a] Poiseuille Flow Through a Pipe III

We wish to simulate this problem across  $\rho$  in the range  $\rho = [0.0, 1.0]$  with unknown initial conditions  $\hat{v}(\rho = 0.0) = \hat{v}_M$  and  $\tau(\rho = 0.0) = \tau_M$ .

We begin by introducing an additional variable:

$$w = \frac{\rho}{T} \cdot \frac{d\tau}{d\rho}$$

We thus obtain three first-order ODEs in the variables  $\hat{v}$ , w, and  $\tau$ .

You can verify easily that all three derivatives are negative everywhere in the pipe except at the center. All three ODEs are analytically unstable when simulating from  $\rho = 0$  to  $\rho = 1$ .

Homework 8 - Problem

Poiseuille Flow Through a Pipe

#### [H6.9a] Poiseuille Flow Through a Pipe III

We wish to simulate this problem across  $\rho$  in the range  $\rho = [0.0, 1.0]$  with unknown initial conditions  $\hat{v}(\rho = 0.0) = \hat{v}_M$  and  $\tau(\rho = 0.0) = \tau_M$ .

We begin by introducing an additional variable:

$$\mathbf{v} = \frac{\rho}{T} \cdot \frac{d\tau}{d\rho}$$

We thus obtain three first-order ODEs in the variables  $\hat{v}$ , w, and  $\tau$ .

You can verify easily that all three derivatives are negative everywhere in the pipe except at the center. All three ODEs are analytically unstable when simulating from  $\rho = 0$  to  $\rho = 1$ .

It thus makes sense to substitute:

$$\sigma = 1 - \rho$$

and simulate from  $\rho = 1$  to  $\rho = 0$ , i.e., from  $\sigma = 0$  to  $\sigma = 1$ .

Homework 8 - Problem

Poiseuille Flow Through a Pipe

### [H6.9a] Poiseuille Flow Through a Pipe IV

We end up with three differential equations of the form:

$$\begin{aligned} \frac{d\hat{v}}{d\sigma} &= f_{\hat{v}}(\tau, \sigma) \\ \frac{dw}{d\sigma} &= f_{w}(\tau, \sigma) \\ \frac{d\tau}{d\sigma} &= f_{\tau}(\tau, w, \sigma) \end{aligned}$$

◆□▶ ◆□▶ ◆三▶ ◆三▶ - 三 - のへぐ

Homework 8 - Problem

Poiseuille Flow Through a Pipe

### [H6.9a] Poiseuille Flow Through a Pipe IV

We end up with three differential equations of the form:

$$\begin{aligned} \frac{d\hat{v}}{d\sigma} &= f_{\hat{v}}(\tau, \sigma) \\ \frac{dw}{d\sigma} &= f_{w}(\tau, \sigma) \\ \frac{d\tau}{d\sigma} &= f_{\tau}(\tau, w, \sigma) \end{aligned}$$

You may need to do something about the third equation for  $\rho = 0$  to avoid a division by zero.

Homework 8 - Problem

Poiseuille Flow Through a Pipe

### [H6.9a] Poiseuille Flow Through a Pipe IV

We end up with three differential equations of the form:

$$\begin{aligned} \frac{d\hat{v}}{d\sigma} &= f_{\hat{v}}(\tau, \sigma) \\ \frac{dw}{d\sigma} &= f_{w}(\tau, \sigma) \\ \frac{d\tau}{d\sigma} &= f_{\tau}(\tau, w, \sigma) \end{aligned}$$

You may need to do something about the third equation for  $\rho = 0$  to avoid a division by zero.

The boundary conditions are:

 $\hat{v}(\sigma = 0) = 0$  $\tau(\sigma = 0) = 1$  $w(\sigma = 1) = 0$

Homework 8 - Problem

Poiseuille Flow Through a Pipe

### [H6.9b] Poiseuille Flow Through a Pipe

We now wish to solve this same problem in a different way using invariant embedding.

We rewrite the three ODEs in DAE form:

 $\begin{aligned} \frac{d\hat{v}}{d\sigma} - f_{\hat{v}}(\tau,\sigma) &= 0\\ \frac{dw}{d\sigma} - f_{w}(\tau,\sigma) &= 0\\ \frac{d\tau}{d\sigma} - f_{\tau}(\tau,w,\sigma) &= 0 \end{aligned}$ 

A D M 4 目 M 4 日 M 4 1 H 4

Homework 8 - Problem

Poiseuille Flow Through a Pipe

#### [H6.9b] Poiseuille Flow Through a Pipe

We now wish to solve this same problem in a different way using invariant embedding.

We rewrite the three ODEs in DAE form:

$$\begin{aligned} \frac{d\hat{v}}{d\sigma} - f_{\hat{v}}(\tau,\sigma) &= 0\\ \frac{dw}{d\sigma} - f_{w}(\tau,\sigma) &= 0\\ \frac{d\tau}{d\sigma} - f_{\tau}(\tau,w,\sigma) &= 0 \end{aligned}$$

and embed the problem in a set of PDEs:

$$\frac{\partial \hat{v}}{\partial \sigma} - f_{\hat{v}}(\tau, \sigma) = \pm \frac{\partial \hat{v}}{\partial t}$$
$$\frac{\partial w}{\partial \sigma} - f_{w}(\tau, \sigma) = \pm \frac{\partial w}{\partial t}$$
$$\frac{\partial \tau}{\partial \sigma} - f_{\tau}(\tau, w, \sigma) = \pm \frac{\partial \tau}{\partial t}$$

Homework 8 - Problem

Poiseuille Flow Through a Pipe

### [H6.9b] Poiseuille Flow Through a Pipe

We now wish to solve this same problem in a different way using *invariant embedding*.

We rewrite the three ODEs in DAE form:

$$\begin{aligned} \frac{d\hat{v}}{d\sigma} &- f_{\hat{v}}(\tau, \sigma) = 0\\ \frac{dw}{d\sigma} &- f_{w}(\tau, \sigma) = 0\\ \frac{d\tau}{d\sigma} &- f_{\tau}(\tau, w, \sigma) = 0 \end{aligned}$$

and embed the problem in a set of PDEs:

$$\frac{\partial \hat{v}}{\partial \sigma} - f_{\hat{v}}(\tau, \sigma) = \pm \frac{\partial \hat{v}}{\partial t}$$
$$\frac{\partial w}{\partial \sigma} - f_{w}(\tau, \sigma) = \pm \frac{\partial w}{\partial t}$$
$$\frac{\partial \tau}{\partial \sigma} - f_{\tau}(\tau, w, \sigma) = \pm \frac{\partial \tau}{\partial t}$$

For now, we don't know yet, which signs to use on the artificially introduced time derivatives. ▲日▼▲□▼▲□▼▲□▼ □ ○○○
